

About Cala Health®, Inc.

Cala Health Inc., an award-winning bioelectronic medicine company, is transforming the standard of care for chronic disease while putting patients at the center. The company’s wearable neuromodulation therapies merge innovations in neuroscience and technology to deliver individualized peripheral nerve stimulation, and its vertically integrated commercial model is reshaping the delivery of prescription therapies. Cala Health’s lead product, Cala Trio therapy, is the only non-invasive, wrist-worn prescription therapy for essential tremor. New therapies are under development in neurology, cardiology, and psychiatry. Cala Health is headquartered in the San Francisco Bay Area and backed by leading investors in both healthcare and technology. For more information, visit CalaHealth.com.

At A Glance

- A bioelectronic medicine company developing a neuromodulation platform of wearable therapies for chronic disease while putting patients at the center of care.
- Anchored by its mission to empower people with chronic disease to lead full and uninterrupted lives and driven by its vision to transform the standard of care for chronic disease with wearable neuromodulation therapies.
- Initial therapy is Cala Trio, an individualized wrist-worn neuromodulation therapy that effectively reduces hand tremors caused by essential tremor (ET), a movement disorder experienced by more than seven million people.
- The company’s products have been designed with the patient at the center leveraging telemedicine and virtual solutions to connect patients with healthcare providers to access new treatment options.
- Headquartered in the San Francisco Bay Area and backed by leading investors in both healthcare and technology.

Essential Tremor

Essential Tremor (ET) is a progressive and clinically heterogeneous condition with sporadic and familial forms. It is one of the most common movement disorders that is well classified in its physiologic and phenotypic mechanisms. Although ET is not a life-threatening condition, it is a life-altering movement disorder affecting 7 million people in the US. Daily activities that were once simple, such as eating, writing, and drinking suddenly become difficult for people with ET. Unfortunately, historical treatment options have been lacking and only 1 in 10 essential tremor patients are satisfied with current treatment.

About The Platform

Cost-effective, individualized, and circuit-based therapy

Safe, wearable, non-invasive neuromodulation devices

Merges neuroscience and technology to deliver peripheral nerve stimulation, without the need for invasive surgery

A robust pipeline includes therapies in neurology, cardiology, and psychiatry
